TOM MCGOWAN: My name is Tom McGowan. Can you hear me?

MR. FLAHERTY: Yes, sir.

TOM MCGOWAN: Las Vegas resident. Not president -- resident. I usually draw a bigger crowd than this, but it's all right.

1 I'll cut directly to the bone without undue deference or fragile sensitivities. [The issue of nuclear waste generation, transport and storage is of historically unprecedented human and universal context, significance and impactive consequences. It ranks on the par with creation, the birth of the Christ and the discovery of the so-called New World, which, in fact, was the other half of the already five billion year old Old World.

Radionuclides are deadly, and they make no distinction on the basis of national and jurisdictional boundaries, racial, ethnic and cultural heritage, rank and station or rank and file, age, gender, lifestyle preference, political persuasion, income level or other demographic delineation whatsoever. They don't care who you are. They kill you regardless. They don't apologize.

Radionuclides are deadly impactive upon human and all other species of organic life, as well as natural environment requisite to sustain life. And ultimately their potential is causal to the extinction with human consciousness itself. We have need of human consciousness at some point in your lifetimes.

It's axiomatic that the Earth's underground hydrogeologic domain is naturally ordered as in a state of variable dynamic flux, ongoing in continuum on the geologic time scale. It's not a steel bowling ball. It's not static or invariable. You are not where you were a minute ago. You moved, even without moving.

Consequently it's scientifically and technologically impossible to guarantee the safe, secure and human intrusion impervious underground storage of high-level nuclear waste in a deep geologic permanent repository via any combination of natural and artificial barriers, statistical probabilistic modeling and/or institutional control over any substantially enduring term either at Yucca Mountain, Nevada or elsewhere nationally or anywhere on this plant. Understand that clearly. Why are you here in the first place? What they're trying to do is impossible, but go ahead, why quibble.

The generic you are conclusively aware of those irrefutable facts. Therefore, I hereby unequivocally assert. I'm not going to try to reason with you about it. That makes no sense whatsoever. The generic you are intentionally engaged in a conspiracy to commit mass genocide on historically unprecedented human and universal scale intergenerationally and in perpetuity. Your victims will be your own progeny. It really took

a lot of brains to figure that out. Your own progeny that will look like you. They will carry your name and your genes.

And the sole difference between you and Adolf Eichmann is that while Eichmann's activities were a finite scope in area, limited term and selectively demographic victimization, your activities are of human and universal scope and unlimited term, enduring as impactful for the rest of human time. Absolutely fantastic what you do.

You're also aware that you're witnessing, upon witnessing, pardon me, the Trinity test detonation of the world's first atomic bomb at Alamogordo, New Mexico -- June 17th was it? I don't know. When? June 16 and 17. It was a rain storm. Dr. J. Robert Oppenheimer, who they called at the time the father of the atomic bomb, he was actually the director of the Manhattan Project, top secret, he uttered the prophetic words from the Bhagavad Gita -- Now I am become death, the destroyer of worlds.

Congratulations the generic you, all of you, not just you. There are thousands of you. The generic you have also become death, the destroyer of worlds, but worst yet you are the current generations of so-called reasoning beings who failed utterly, yourselves, each other and all posterity in sight of almighty God.

And on the public record I refuse to allow your crime to be attributed to me. If I have to sue you alone I will, guaranteed.  

How much time you got left?
